"Watch a pro football game, and it's obvious the guys on the field are far faster, stronger and more willing to bear and inflict pain than you are. Surely you would say, 'I don't want to play against those guys!'

Well, 90% of stock market volume is done by institutions, and half of that is done by the world's 50 largest investment firms, deeply committed, vastly well prepared -- the smartest sons of bitches in the world working their tails off all day long. You know what? I don't want to play against those guys either."

Charles Ellis – Chairman Yale Endowment

Asset allocation process

- 1. Forecast returns of asset classes
- 2. Forecast risks of asset classes
- 3. Trade off risk and return to create model asset allocations
- 4. Match model allocations to client's profile
- 5. Implementation

Risk of not meeting cash flow needs

- Main problem is insufficient, real, long term returns
- Anxiety along the way also an issue

 Volatility
 - Volatility of income
 - Familiarity with the assets
- Liquidity easily managed
